

RSA® DATA LOSS PREVENTION NETWORK

Data loss prevention for sensitive information in transit

AT A GLANCE

- Reduce the risk of sensitive data leaving the network perimeter via e-mail, web, instant messaging and telnet
- Audit, encrypt, quarantine or block unauthorized transmissions of compliance-driven information or intellectual property in real-time as defined by policy
- Involve end users in data security processes and remediation to build awareness and reduce administrative cost
- Maintain competitive advantage and brand value through comprehensive protection of corporate data

OVERVIEW

RSA® Data Loss Prevention (DLP) Network identifies and enforces policies for sensitive data transmitted through corporate e-mail (SMTP), webmail, instant messaging, FTP, web-based tools (HTTP or HTTPS) or any generic TCP/IP protocols.

Benefits

- Reduce risk exposure dramatically and quickly via comprehensive support for numerous protocols
- Gain deep visibility into network policy violations by senders, recipients and content
- Flexible remediation options allow custom policy responses to varying levels of risk
- Enable global operations via scalable architecture and multi-lingual content analysis
- Unmatched breadth and depth of policy library and classification technologies result in high accuracy and ROI
- Proactively ensure that business practices and compliance requirements are followed
- Flexible deployment options result in lower operational costs
- Passive and in-line deployments support both passive monitoring of network traffic and active policy enforcement

Features

- **Flexible notification.** Optionally alert senders, their manager, administrator or a designated group when a policy is violated.
- **Self remediation.** Optionally empower end users to self-remediate DLP incidents and maintain an audit trail of justifications.
- **Numerous automatic and manual remediation options.** Audit, encrypt*, quarantine and block actions allow organizations to align policy responses based on varying levels of risk.
- **Broad protocol coverage.** Port-agnostic analysis for common protocols such as SMTP, IMAP, POP, HTTP/S, FTP, telnet, and IM.
- **Sophisticated network statistics.** Real-time feedback on system throughput, breakdown by protocols, capacity and trending – ideal for troubleshooting and support.

Data Sheet

“We’ve been very impressed with the RSA DLP Suite. It helps educate users on correct email practices while flagging potential risks to our administrators. This dual approach has accelerated our journey to compliance, reducing risk exposure 75% in the first year.”

ABOUT RSA

RSA is the premier provider of security, risk and compliance solutions, helping the world’s leading organizations succeed by solving their most complex and sensitive security challenges. These challenges include managing organizational risk, safeguarding mobile access and collaboration, proving compliance, and securing virtual and cloud environments.

Combining business-critical controls in identity assurance, data loss prevention, encryption and tokenization, fraud protection and SIEM with industry leading eGRC capabilities and consulting services, RSA brings trust and visibility to millions of user identities, the transactions that they perform and the data that is generated.
